Profile

Software Engineer with 5+ years of experience and a strong focus on frontend engineering. Experienced in building scalable web products with React, Svelte, Vue, and TypeScript, complemented by hands-on work across backend services, integrations, cloud systems, and API-first architectures.

Strong focus on end-to-end ownership, engineering quality, maintainable systems, and modern AI-assisted development practices.

Professional Experience

10/2025 – Present
Porto (Remote)

Software Engineer — Frontend Focus, *Bloq.it* [🔗](#)

- Co-developed a modern, performance-focused **Svelte application for smart locker operations**, built with TypeScript, automated testing, and API-first principles.
- Built its **Go Backend-for-Frontend**, introducing reusable modules and strongly typed API integrations generated with Hey API.
- Helped establish **AI-assisted engineering workflows**, reusable skills, documentation, and development patterns to improve team productivity and engineering consistency.
- Develop and modernize features across an existing **Vue back-office platform**, including the migration of legacy Options API code to the Composition API.
- Own features end-to-end, contributing to **technical design, planning, task definition, sprint preparation, implementation, review, observability, and frontend engineering standards**.

06/2023 – 10/2025
New York, USA

Software Engineer — Frontend Focus, *Aptivio*

- **Co-led the development of a React application from scratch**, defining a modular and scalable architecture integrated with **AI-powered agents**.
- Built a reusable **design system and component library**, supported by **Storybook** documentation and **Vitest** automated testing.
- Developed and maintained **Chrome Extensions** with dynamic UI injection and real-time integrations with platforms such as LinkedIn and HubSpot.
- Owned the development of **Microsoft Teams and Slack integrations**, spanning frontend flows, bots, backend services with **.NET/Azure Functions**, and external API integrations.
- Built and maintained **CI/CD pipelines**, automating validation, testing, versioning, and deployment workflows.

Tech Stack: React, TypeScript, .NET, Azure Functions, Microsoft Teams Toolkit, Slack API, Chrome Extensions, Storybook, Vitest

01/2021 – 06/2023
Porto, Portugal

Full-Stack Developer, Losch Digital Lab

- Contributed to the company's **first production project**, a vehicle customization platform adopted nationwide across Luxembourg.
- Migrated the frontend from **Sapper/JavaScript to SvelteKit/TypeScript**, improving maintainability, scalability, and developer experience.
- Developed responsive, animated user interfaces and a reusable component library, translating UI/UX designs into production-ready experiences.
- Integrated frontend functionality with **Golang and MongoDB APIs**, while contributing to code reviews and mentoring junior developers.

Tech Stack: SvelteKit, TypeScript, JavaScript, Golang, MongoDB, HTML, CSS, Vitest

Education

2016 – 2020
Felgueiras, Portugal

Degree in Software Engineering,
Escola Superior de Tecnologia e Gestão - IPP
